## Working with Maple Ridge Cabinetry

---

### **Company History**

Maple Ridge Cabinetry is a fully custom company located in northeast Georgia. Since 1994 we have been specializing in high end, all wood cabinetry that reflects the growing movement of custom furniture for kitchens and baths.

### **What do we mean when we say “fully custom”?**

We will build cabinets in 1/16” increments in all directions. While this is probably the case for many other companies as well, we also charge by the 1/16” increment. You don’t have to pay for a 30” cabinet to get a 27 7/8” cabinet. We also customize door and drawer sections to any configuration (within the limits of the door and drawer style you select) without an up charge. We allow cabinets to be built up to 8 ft wide with as many sections as you request without any additional charge. Simply put customizing is standard.

### **Changing the way you design.**

The concept at Maple Ridge is to take the space that is available and create a fully functional work space for that area. Rather than making the walls fit the cabinets, make the cabinets fit the walls.

### **How can we do this?**

This is easily achieved by utilizing manufacturing technology that does away with standards. Using nesting based manufacturing that synchronizes with design software, changes are limitless with the click of a button. We don’t break a room down by boxes, but rather by things such as doors, drawer boxes, drawer fronts and box parts.

### **What are the advantages of this?**

From complex layouts to simple layouts, it is rare to find a room that works out exactly to the inch, never mind to a three inch increment. You then either have to use fillers or pay a higher price for the cabinet. We charge for exactly what you received. All of your challenging designs become much easier when you don’t have any limitations on size. You will be able to save money and get the design you want.

### **Can I use 2020?**

You can use 2020 for design purposes, but you will not be able to price with it. Everything must be drawn on our software. Once you send in a set of drawings, whether in 2020 or sketched on a napkin, our drafting department will input your design into our software and send a set of drawings back to you within 48 hours.

### **How do I get a price?**

Submit your drawings to the drafting department and you will receive a set of drawings and pricing within 48 hours. Once you have received your pricing you can use the price comparison charts (page I-3 - I-5) to see how different selections would change the price.

### **How do I know what to design?**

Use our design guide to help create the look you want, or simply submit a current design and let us help you do it with Maple Ridge. You or your customer can also visit our website, [www.mapleridgecabinetry.com](http://www.mapleridgecabinetry.com), to use our online design guide to help determine what design elements you would like to use.

# Information

## The Process

### **How do I read the drawings?**

See the drawings on page I-6 and I-7 for information on how to read the drawings.

### **How do I make revisions?**

Revisions can be done by marking up the drawings and faxing them back. You can also request an online meeting with your project manager to make real time changes.

### **What are the cabinet standards?**

We offer three types of framed cabinetry: inset, beaded inset and a full overlay version. See framing options on page S-2 for standards.

### **What are our terms?**

50% deposit – 50% before shipment

### **How is shipping handled?**

Most orders can be shipped directly to the job site from our factory using our dedicated truck services. Cabinets are individually foam, cornered and shrink wrapped. For small orders, common carriers may be used.

### **How does the job process work?**

There are 2 sign offs that are necessary to get an order into production. A signed quote and deposit will get the job into the production schedule. A set of signed drawings will get the job into production. So the first step is to submit your plans for pricing, and then make any necessary revisions. Once you have confirmed that the drawings you received from the drafting department are correct, sign each page and fax them in. This along with a 50% deposit will get your project ordered. You can then get a shipping date for the project. Prior to shipping, the balance of the price is due. If the project is being shipped on our dedicated truck services, it can be delivered directly to the job site. Small orders and punch lists will be shipped with common carriers or UPS.

### **What are my lead times?**

Lead times stay around 8-10 weeks for most orders. Punch lists take 1-2 weeks.

### **Installation drawings and guidelines**

Installation drawings are shipped with each job. Each cabinet has a label on it that corresponds to the installation drawings.

# Information

## Reading our Drawings

## Caring for Your Cabinets

With minimal care, your cabinets will last a lifetime. Do not let water stand on cabinetry. If they get wet, drying quickly is important. Normal cleaning can be done with dish soap and water. For heavy cleaning you may use mineral spirits.

### Door Adjustment

### Drawer Adjustment (clip styles may vary)

## Warranty

### Limited Lifetime Warranty

We warrant our cabinetry to be free from defects in material and/or workmanship under normal residential usage to the original purchaser for the lifetime of the product.

This is a product warranty only and excludes labor for removal or replacement of defective parts. Our obligation under this warranty shall be limited to the replacement of any part or parts that may prove defective under normal residential usage as determined by our examination.

This warranty is expressly in lieu of any and all other warranties, expressed or implied. This warranty shall not apply to our cabinetry or parts of our cabinetry that have been subjected to alteration, misuse, negligence, abuse, improper installation, storage and handling.

## Preserve

Eco Friendly Options from Maple Ridge Cabinetry

At Maple Ridge Cabinetry, we are always looking for new ways to improve our product. Recently, alternative materials and processes have become available that allow our company and industry to become more environmentally friendly. We have developed a product line that utilizes these materials and processes to give our customers a green option.

© The Building Group, Inc.

# Information

FSC Certified Hardwoods are available in Maple, Cherry, Alder and Eucalyptus. Other hardwood selections are available by request.

Formaldehyde free, FSC certified plywood is available. The plywood is compliant with the U.S. Green Building Council's Leadership in Energy and Environmental Design standards, earning 1 point for LEED's EQ Credit 4.4 for Low Emitting Material: Composite Wood.

With the elimination of formaldehyde from plywood, the improved indoor air quality of your home or building will provide a healthier environment for you to enjoy.

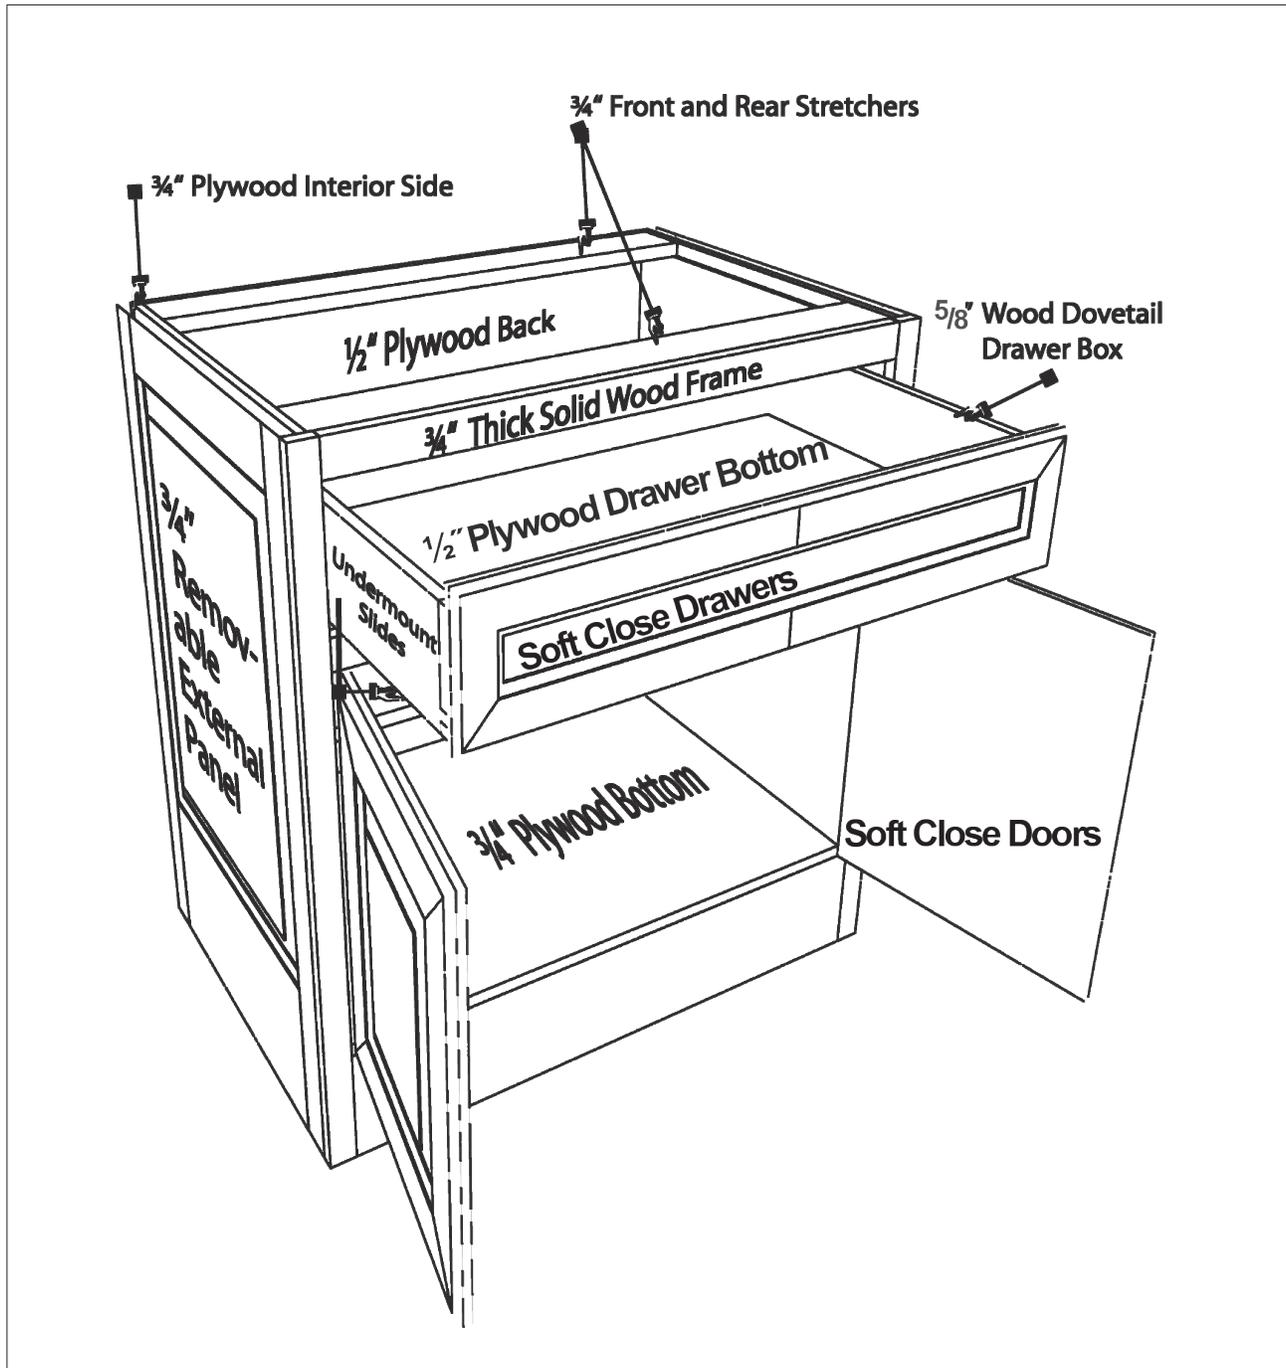

Waterborne lacquers are an environmentally friendly final step for your cabinetry. Formulated with Acrylic self-cross linking resins, this system outperforms a typical nitrocellulose lacquer. This lacquer is formulated to have zero HAPS, low VOC, zero formaldehyde and low odor, making them ideally suited for applications where a "green" environmentally friendly wood finish is desired.

# Wood Species

## Wood Species

### ALDER

**History:** Grows in northern hemisphere - Europe, Russia, western Asia, and Japan. Red alder grows on Pacific coast of United States and Canada.

**Grain:** Straight grained, fine textured, orange brown sapwood and heartwood with no outstanding figure.

**Color:** Light brown to Reddish brown

**Characteristics:** Moderately heavy and soft with low bending strength, shock resistance, stiffness, and decay resistance.

**Finishing:** Alder Takes stain well and can be made to match a wide range of colors.

**Recommended Finishes:** 500's , 800's , 900's

### BIRCH

**History:** Grows throughout Europe and the United States.

**Grain:** Straight grained and fine textured with creamy white to pale brown wood (no demarcation between heartwood and sapwood).

**Characteristics:** Fairly heavy with moderate strength, stiffness, stability, and shock resistance properties. Steam bending often impacted by knots and irregular grain.

**Color:** Similar to Maple in appearance and color

**Finishing:** Takes stains and paints well

**Recommended Finishes:** 500's , 600's , 700's , 800's ,900's , 1100's

### CHERRY

**History:** Like all fruit trees, cherry belongs to the rose family and was used as early as 400 B.C. by the Greeks and Romans for furniture making. Cherry helped define American traditional design because Colonial cabinetmakers recognized its superior woodworking qualities. Today, cherry helps define Shaker, Mission and country styling. The wood from the cherry tree can be described in a single word: beautiful. Its rich red-brown color deepens with age.

**Color:** Rich, reddish-brown. Cherry darkens considerably with age and exposure to sunlight.

**Grain:** Straight-grained and satiny. Small gum pockets produce distinctive markings.

**Characteristics:** Light, strong, stiff and rather hard. Cherry's grain is more subdued than some other hardwood species, with very interesting character.

**Finishing:** Cherry is unsurpassed in its finishing qualities-its uniform texture takes a finish very well.

**Recommended Finishes:** 500's, 800's, 900's

### CYPRESS

**History:** Consists of several species mainly concentrated around the Mediterranean as well as Australia, California, & Asia Minor.

**Grain:** Straight grained and fine, even texture.

**Characteristics:** Light, low to moderate strength and stiffness, moderate shock resistance, good stability in service, and excellent decay resistance. Not suitable for steam bending. Used for ship/boat building, chest and closet lining, utility furniture and outdoor cabinetry.

**Color:** orange to pinkish brown heartwood and pale-colored sapwood.

**Finishing:** Takes stain satisfactorily and paints well.

**Recommended Finishes:** 500's, 800's, 900's

# Wood Species

## Wood Species

---

### HICKORY

**History:** A Native American tree, hickories are members of the walnut family. Hickory is the hardest, heaviest and strongest American wood in common use. Westward trekking pioneers allegedly made hickory a prerequisite for their wagon wheels.

**Color:** White to tan to reddish-brown with inconspicuous fine brown lines.

**Grain:** Fine grain.

**Characteristics:** Extremely tough and resilient, even texture, quite hard and only moderately heavy.

**Finishing:** The grain pattern welcomes a full range of medium-to-dark finishes and bleaching treatments

**Recommended Finishes:** 500's, 800's, 900's

### EUCALYPTUS

**History:** There are more than 700 species of Eucalyptus, mostly native to Australia, and a very small number are found in adjacent parts of New Guinea and Indonesia and one as far north as the Philippines islands.

Eucalyptus has attracted attention from global development researchers and environmentalists. It is a fast-growing source of wood, its oil can be used for cleaning and functions as a natural insecticide, and it is sometimes used to drain swamps and thereby reduce the risk of malaria. Topical ointments containing eucalyptus oil have been used in traditional Aboriginal medicines to heal wounds. Lyptus is a wood made from a hybrid of two species of Eucalyptus trees. It was developed to be quickly harvested - in about 15 years or even sooner in wood from cooler climates.

**Grain:** Wavy grain patterns

**Color:** The heartwood of robusta eucalyptus is light red to reddish brown in color as it comes from the saw. It darkens to a rich reddish brown in seasoning. The narrow 1-to 2-inch band of sapwood is gray to pale brown in dry lumber.

**Characteristics:** The wood is moderately coarse textured with an interlocked grain which usually produces a ribbon figure of light and dark stripes on quarter-sawn surfaces. Eucalyptus is a very strong wood. In strength properties other than shock resistance and hardness, it is stronger than most mainland woods of comparable density.

**Finishing:** Takes stain satisfactorily

**Recommended Finishes:** 500's, 800's, 900's

### MAHOGANY

**History:** The heavyweight of all woods, mahogany is one of the most valuable timber trees. Popular in the '50's, mahogany is making a comeback due to the new attraction to the "red" woods.

**Color:** Varies from light red or pale tan to a rich dark deep red or deep golden brown, depending on country of origin.

**Grain:** It is generally straight grained but is prized for its figures which include stripe, roe, curly, blister, fiddleback, and mottle.

**Characteristics:** Extremely strong, hard, stable and decay resistant

**Finishing:** Finishes and stains to a beautiful natural luster.

**Recommended Finishes:** 500's, 800's, 900's

# Wood Species

## Wood Species

### MAPLE

**History:** Until the turn of the century, the heels of women's shoes were made from maple, as were airplane propellers in the 1920s. Maple has been a favorite of American furniture makers since early Colonial days. Hard maple is the standard wood for cutting boards because it imparts no taste to food and holds up well.

**Color:** Cream to light reddish-brown.

**Grain:** Usually straight-grained and sometimes found with highly figured bird's-eye or burl grain. Bird's-eye resembles small circular or elliptical figures. Clusters of round curls are known as burl.

**Characteristics:** Heavy, hard, strong, tough, stiff, close-grained and possesses a uniform texture. Maple has excellent resistance to abrasion and indentation.

**Finishing:** Takes stains and paints well.

**Recommended Finishes:** 500's, 600's, 700's, 800's, 900's, 1100's

### OAK

**History:** The oaks-red and white-are the most abundant U.S. hardwood species. It would be difficult to name a wood with a longer and more illustrious history in furnishings and interior design. Oak was a favorite of early English craftsmen and a prized material for American Colonists. White oak is just one of 86 oak species native to this country, but it is the classic oak of America.

**Color:** White Oak- ranges from nearly white sapwood to a darker gray brown heartwood, Red Oak-ranges from nearly white cream color to a beautiful warm, pale brown heartwood, tinted with red.

**Grain:** The grain is distinguished by rays, which reflect light and add to its attractiveness. Depending on the way the logs are sawn into timber, many distinctive and sought after patterns emerge: flake figures, pin stripes, fine lines, leafy grains and watery figures.

**Characteristics:** Heavy, very strong and very hard, stiff, durable under exposure, great wear-resistance.

**Finishing:** Oaks can be stained beautifully with a wide range of finish tones.

**Recommended Finishes:** 500's, 800's, 900's

### PINE

**History:** Grows in southern United States.

**Grain:** Generally straight but uneven grained with a medium texture. Yellowish white sapwood and reddish brown, orange, or yellow heartwood.

**Characteristics:** Moderately heavy and hard, stiff, moderately strong and shock resistant, moderately stable in service, and moderately decay resistant.

**Color:** Generally light yellow

**Finishing:** Paints, stains, but resin bleed-out can cause problems in paints.

**Recommended Finishes:** 500's, 600's, 700's, 800's, 900's, 1100's

# Wood Species

## Wood Species

### SPANISH CEDAR

**History:** From the earliest days of exploration and colonization in tropical America, Spanish-cedar has been one of the most important timber trees of the area. The wood became an article for the export trade during the 1800's when the cigar industry demanded the use of Spanish-cedar for packing cigars. These fragrant boxes were commonplace before rising costs in the 1930's finally forced the cigar industry to turn to paperboard . Spanish-cedar remains to this day as one of the most valued trees for local use in Latin America.

**Grain:** The wood of Spanish-cedar is coarser textured than that of mahogany.

**Characteristics:** Moderately heavy, hard, strong, and stiff, with good decay resistance and dimensional stability.

**Color:** Freshly cut heartwood is pinkish to reddish brown, but upon exposure it becomes red or dark reddish brown, sometimes with a purplish cast. It is reported to be darkest when grown on the drier sites, and this type of wood is preferred by the local craftsmen.

**Finishing:** Finishes to a natural luster and also takes stains well

**Recommended Finishes:** 500's, 800's, 900's

### WALNUT

**History:** Black walnut trees grow in the central to eastern regions of North America. The most notable attribute of the black walnut tree is its characteristic smell. The black walnut nuts are covered in a smooth hard shell that is difficult to break. The black walnut has a long history of medicinal and food uses. Once used as treatment for diphtheria and syphilis, black walnut is now used mostly for the astringent properties of its hulls and bark. The nuts continue to be a popular ingredient in a number of bakery products. Black walnuts contain essential fatty acids that may help to protect the body against heart disease.

**Color:** Rich dark brown heartwood and nearly white sapwood.

**Grain:** Usually straight-grained and sometimes found with wavy to highly figured grain.

**Characteristics:** Moderately heavy, hard, strong, and stiff, with good decay resistance and dimensional stability.

**Finishing:** Walnut has a beautiful natural color and also takes stains well.

**Recommended Finishes:** 500's, 800's, 900's

### WESTERN RED CEDAR

**History:** Grows in western United States and Canada.

**Grain:** Generally straight grained with a moderately coarse, uniform texture. Rich dark brown heartwood and nearly white sapwood.

**Color:** Pinkish brown to dull brown heartwood and nearly white sapwood.

**Characteristics:** Moderately heavy, hard, strong, and stiff, with good decay resistance and dimensional stability.

**Finishing:** Takes both stain and paints well.

**Recommended Finishes:** 500's, 800's, 900's

# Finishes

## About our Finishes

Maple Ridge Cabinetry offers many distinct finishes including paint, stain, glaze, and old world options. In addition to helping you find the finish that will best enhance your cabinet style, we use only the highest quality finishing materials to ensure a long lasting, durable product.

### Key Benefits:

- Meets AWI OP-4 chemical and moisture resistance
- Non-yellowing
- Totally HAPS free
- Ultra-low formaldehyde
- High solids for outstanding film build
- Mar and scratch resistant
- Withstands prolonged periods of hot and cold exposure
- Withstands substances typically found in kitchens and bathrooms

Our finishes have undergone rigorous quality tests to verify performance and application characteristics.

### Glazing, Distressing & Aging

Glazing, distressing and aging brings out an authentic antique character in any piece. This can enhance the beauty of an entire kitchen or accent just one piece.

*To better serve our customers in the selection process, samples of all of our finishes are available.*

### Resistant To:

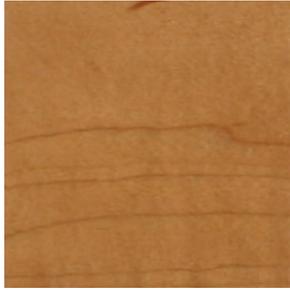

- Water
- Coffee/Tea
- Ketchup
- Vinegar
- Bleach
- Glass Cleaner
- Liquid Floor Cleaner
- Grape Juice
- Orange Juice
- Olive Oil
- Detergent Solution

### GENOA ART

# Art

## Custom Handpainted Art

Make a statement with hand painted art. From subtle monochromatic designs to colorful pictorial brushstrokes, our artist can design artwork to fit a cabinet door, hood or panel that will closely coordinate with a motif you suggest. Or choose from any of the designs shown here. Designs may appear different on your hood depending on the size and shape.
